

SchmancyBox^{v1.0}

Ok so I downloaded it, now what?

SchmancyBox is similar to other Lightbox (LB) scripts in its application. The key difference is that the LB effect is called on the class rather than the Rel tag.

This Means?

The **Class** applies SchmancyBox to the link.

The **Rel** picks the gallery.

You can use it on an individual link...

e.g. `<img...>`

Changing the default iFrame height for a one off div...

e.g. `<div class="Schmancy">

</div>`

N.B. You can not apply SchmancyBox like this `Rel="Schmancy[Gallery]"`

Coming in Version 1.5

Lightboxing all links within a div...

e.g. `<div class="Schmancy:link">

</div>`

Got Feedback?

We would love to hear your feedback, leave it at
